

# SRC - H

## VENTILATOR UNIT

**Samp<sup>®</sup>**  
SOLUZIONI AEROMECCANICHE  
S.p.A.

## SRC-H

Non-residential ventilator unit with dual flow and high yield heat recovery.

## PERFORMANCE

Equipped with counter current heat exchanger in aluminum (Eurovent certified) and electronic backward blade ventilators. The total bypass as standard allows favorable climatic conditions to be taken advantage of outside the building for free cooling (or free heating) in automatic mode.

## STRUCTURE

SRC-H is manufactured using a profiled extruded aluminum frame and 25 mm thick sandwich panels, insulated in polyurethane foam. The panels and inner parts are manufactured in Aluzinc®, material that ensures high strength against corrosion and oxidation. A panel with shutter opening eases access to the filters (F7 for the renewed air flow and G4 for the extraction air flow). SRC-H is prepared for installation outdoors (with an optional, specific protective roof) and indoors. Available in 4 sizes, it can be equipped with air post-treatment systems (inside the unit) such as: hot/cold water battery, electrical heater or direct expansion battery. SRC-H was designed to enable easy configuration of the connection to the air distribution/captation ducts. It is also possible and easy to install post-air treatment devices after sale.

## CONTROLS

SRC-H was supplied with an electric box and control system; it is available in a version equipped with CM-EVO control and a version equipped with CM-EVO-IP control prepared for complete integration in home automation systems (Modbus protocol with Ethernet connection or, on request, with the addition of connection RS485). The new version of our control systems enables extremely easy and rapid passage from a control system to another, even after installation with the single replacement of the remote panel.

The CM-EVO control has a colored, backlit touch screen interface with intuitive viewing of the working status of the machine. It enables precise adjustment of ventilator speed and has a weekly, time schedule for automatic management of the ventilators. It can be controlled by an external switch to activate the booster function, it can automatically adjust the air flow rate if connected to an air quality probe, it can manage any air post treatment accessories, it automatically manages the bypass and prevents heat exchanger freezing by managing the speed of the ventilators or, if installed, an electrical pre-heating resistor (optional accessory outside the machine); it signals to the user the need to replace the filters (the clogging status of the filters is monitored by a pair of different pressure switches, supplied as standard) or an anomaly, indicating the origin. With the addition of optional accessories (COP kit and CAV kit installed on the channel) you can manage the ventilation machine in constant pressure or constant flow rate mode.

The CM-EVO-IP control has the same characteristics as the CM-EVO version with the addition of Modbus communication protocol which allows full control of the machine by the supervision software of the home automation system. The implemented webserver allows interaction with the machine, even with an internet browser of a device connected (even from remote) to the home automation system in which the machine is inserted.

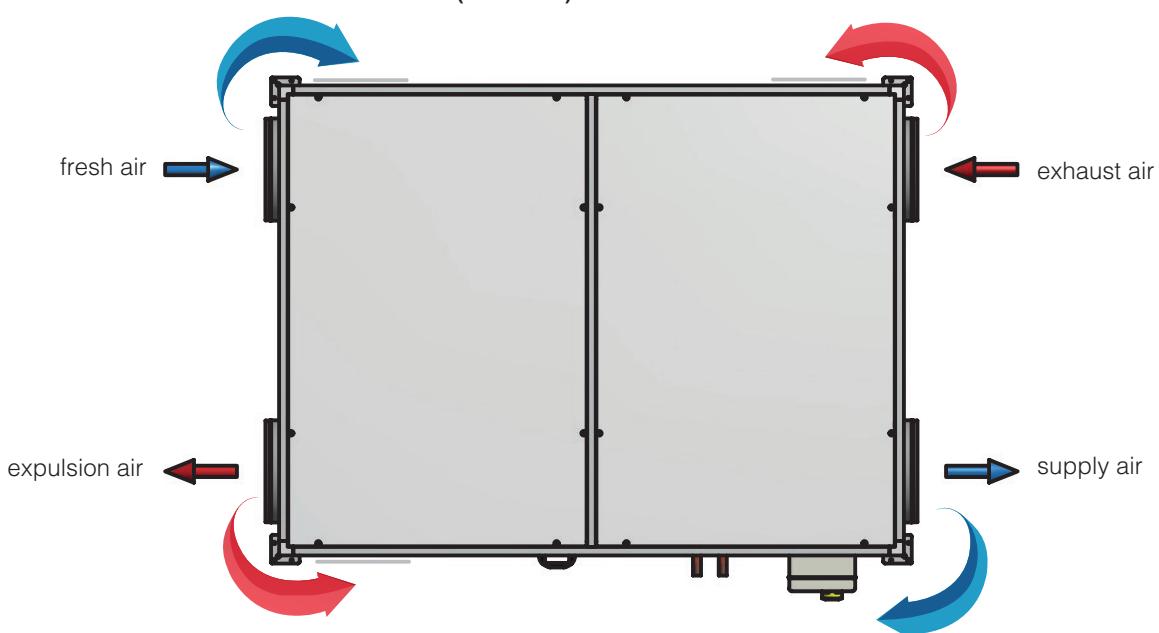

## ACCESSORIES

SRC-H can be equipped with other accessories such as:

- . R.H. of probe, CO2 or CO2 / VOC
- . Operating kit pressure or constant flow
- . protection roof for outside installation
- . grilles and damper

*For a more complete view of the characteristics of the control panels, please read the specific manuals.*

Counterflow heat exchanger made of aluminum manufactured by RECUTECH  
RECUTECH participates in the Eurovent Certification Program

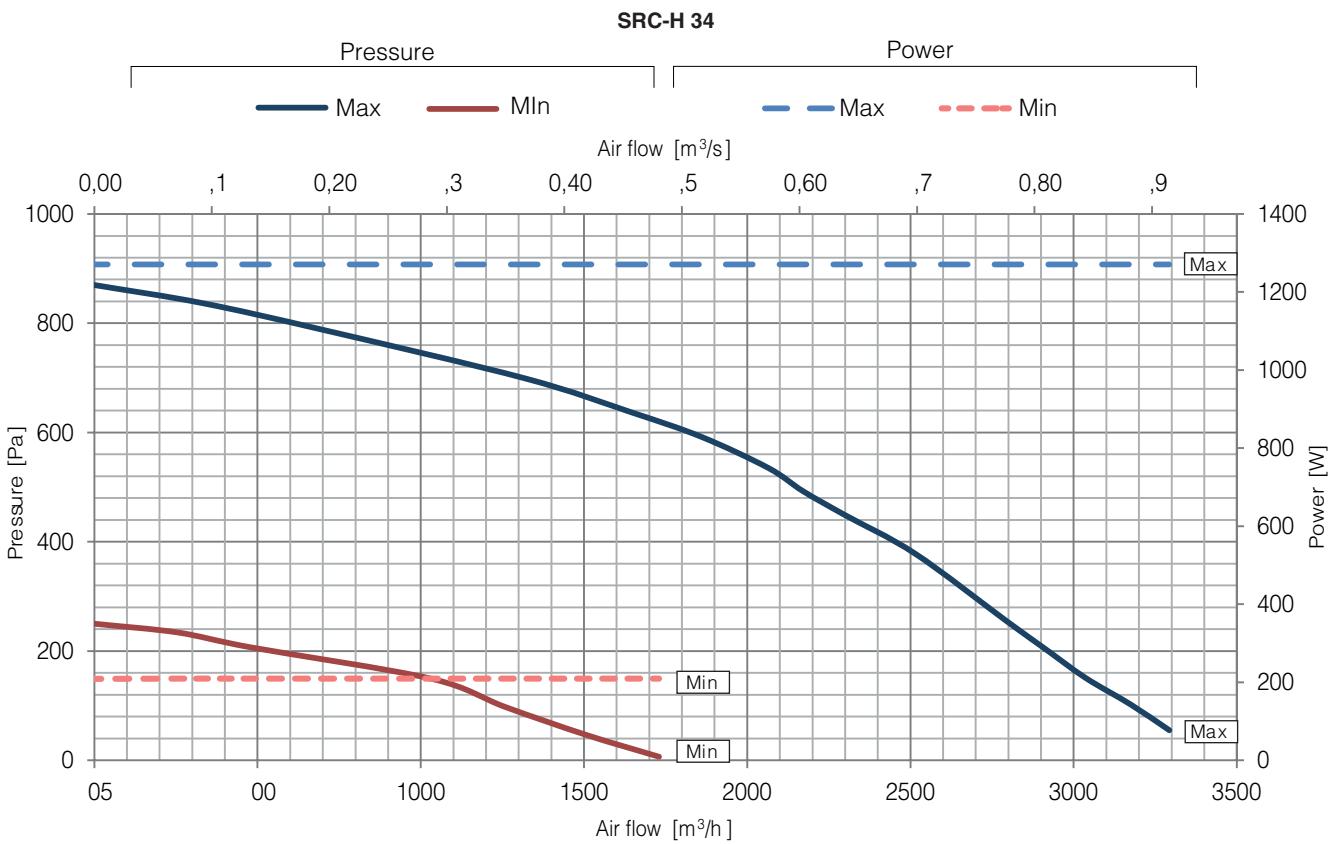

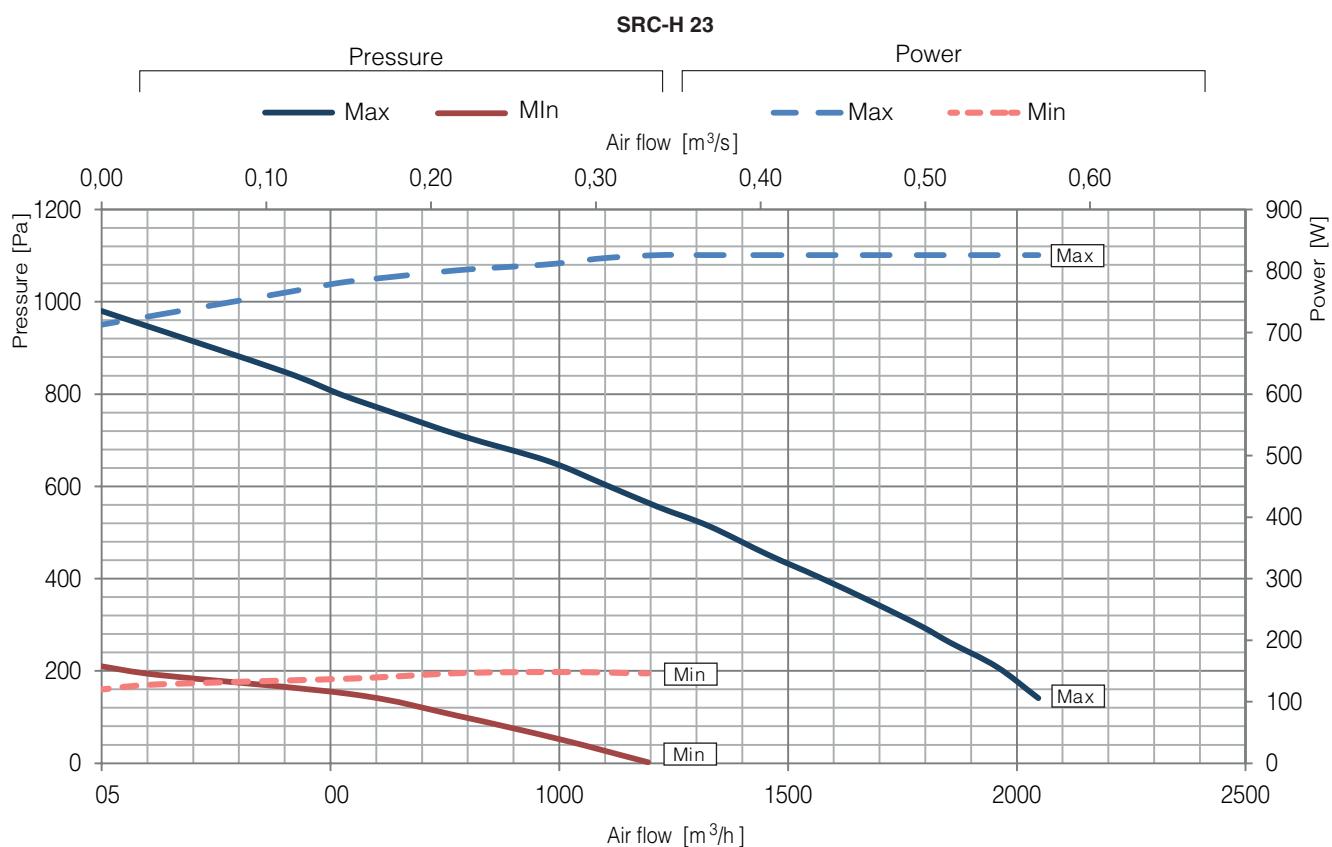

### PERFORMANCES (UNI EN 13141-7)

The unit must be ducted properly: SAMP authorizes the use only according to its performance diagram shown into this catalogue.  
The declared performances are with CLEAN filters, and guaranteed ONLY with the original filters SAMP low pressure drop.

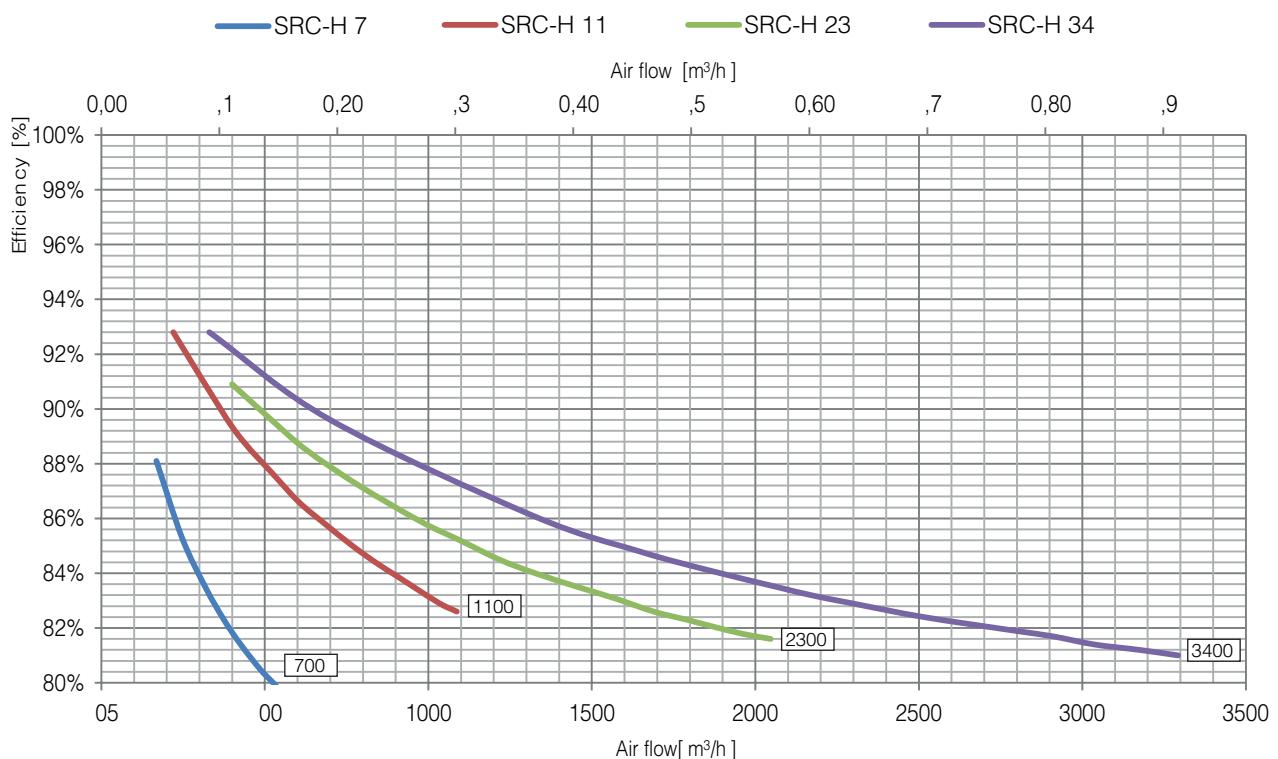

### PERFORMANCES (UNI EN 13141-7)

The unit must be ducted properly: SAMP authorizes the use only according to its performance diagram shown into this catalogue.  
The declared performances are with CLEAN filters, and guaranteed ONLY with the original filters SAMP low pressure drop.

### HEAT RECOVERY PERFORMANCE (sensible efficiency)

Values referred to the following conditions (UNI EN 13141-7): Tbs external air 5°C; U.R. esternal 72%; Tbs environment 25°C; U.R. environment 28%
